

How to Show/Hide Course Menu Links

Once you've created the links for the items you want in your course menu, you might want to change the availability setting for the link. You choose whether or not a course menu link is visible to students. As the instructor, you will always be able to see the links you have created. If a link has a gray box and a diagonal line next to it, that means the link is not currently visible to students.

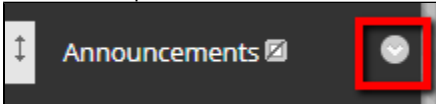

A plain gray box indicates that the link contains no content.

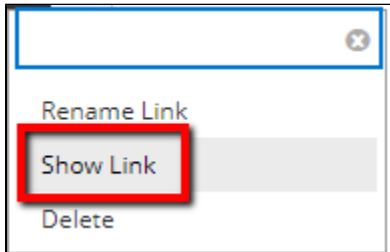

Step-by-step guide

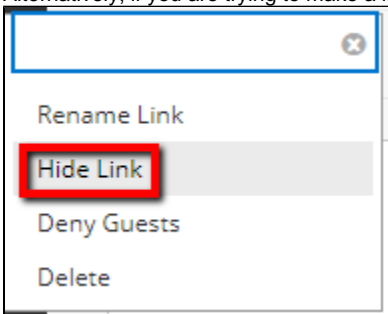

1. Hover over the course menu link that you want to edit.
2. Select the drop-down arrow next to the course link.

3. Choose **Show Link** to make the link visible to students.

4. Alternatively, if you are trying to make a link unavailable to students, select **Hide Link**.

Remember to check for the gray box with the diagonal line before instructing students to visit a link on your course menu. See [Troubleshooting Students Unable to See Items in Your Course](#) for more information.
